## AMENDMENTS TO THE CLAIMS

Upon entry of the amendment, the status of the claims will be as shown below. This listing of claims replaces all previous versions and listings of claims in the present application.

## Listing of Claims

1. – 19. (Cancelled)

20. (New) A display processor which displays a synthesized superimposed graphics image, based on a program which is downloaded and executed, the display processor comprising:

a downloader operable to download the program;

an executioner operable to execute the downloaded program;

a provider operable to provide, according to a request from the program executed by the executioner, a plurality of storage areas, each storage area storing a graphics image;

an order storage in which an order of superimposing the graphics images stored in the provided plurality of storage areas is stored;

a notifier operable to provide, to the program executed by the executioner, a notification regarding the order stored in the order storage; and

a display operable to superimpose and display the graphics image stored in each of the plurality of storage areas for storing the graphics images, such that the graphics image is overwritten according to the order stored in the order storage to form the synthesized superimposed graphics image,

wherein, in the program executed by the executioner, the graphics images are stored in the plurality of storage areas for storing the graphics images in accordance with the order stored in the order storage.

21. (New) A display processing method for displaying a synthesized superimposed graphics image, based on a program which is downloaded and executed, said method comprising:

downloading the program;

executing the downloaded program;

providing, according to a request from the executed program, a plurality of storage areas, each storage area storing a graphics image;

providing, to the executed program, a notification regarding an order of superimposing the graphics images stored in the provided plurality of storage areas; and

superimposing and displaying the graphics image stored in each of the plurality of storage areas for storing the graphics images, such that the graphics image is overwritten according to the order of superimposing the graphics images to form the synthesized superimposed graphics image,

wherein, in the executed program, the graphics images are stored in the plurality of storage areas for storing the graphics images in accordance with the order of superimposing the graphics images.

22. (New) A computer-readable storage medium encoded with a computer-executable program for displaying a synthesized superimposed graphics image, based on an application

program which is downloaded and executed, the computer-executable program causing a computer to execute:

downloading the application program;

executing the downloaded application program;

providing, according to a request for the executed application program, a plurality of storage areas, each storage area storing a graphics image;

providing, to the executed application program, a notification regarding an order of superimposing the graphics images stored in the provided plurality of storage areas; and

superimposing and displaying the graphics image stored in each of the plurality of storage areas for storing the graphics images, such that the graphics image is overwritten according to the order of superimposing the graphics images to form the synthesized superimposed graphics image,

wherein, in the executed application program, the graphics images are stored in the plurality of storage areas for storing the graphics images in accordance with the order of superimposing the graphics images.
